

程序流程图

编译器先生成全局变量，对象等如下：

```
1,CMsEdit_WendyApp
theApp;
2,CMsEdit_WendyDlg*
gpMsEdit_WendyDlg=NULL;
3,Master g_Master;
HANDLE g_hEvent;
//CLog w_Log;
CLog w_InofLog;
CString s_Log;
CString s_eLog;
CProgressDlg
*g_pProDlg;
DWORD g_fileSizeKB;
DWORD g_fileSizeMB;
CStringArray pre_files;
int mode=1;
DWORD maxMB=500;
int pre_mode=mode;;
DWORD
pre_maxMB=maxMB;
4,CArrayItemDataFrame
mCArrayItemDataFrame
;
CListDataFrame
mCListDataFrame;
CListFrame_e
mCListFrame_e;
_tagTTDataFrame
*pFramePara;
_tagTTDataFrame
*pFramePara_wf;

extern HANDLE
g_hEvent;
```

由系统加载器根据编译器选项及协议加载运行时库中的主函数等
